

Hybrid & Electric Vehicle Systems

The increasing number of hybrid and electric vehicles on our roads requires all workshops to have some understanding of the key components and vehicle architecture. As with any high voltage system, safe servicing procedures are also essential.

Topics discussed during this session:

- ▶ Design principles and components
- ▶ Hybrid and electric vehicle structures
- ▶ Battery technology, drivelines and e-machines
- ▶ Vehicle and personal safety precautions

Course Duration – **1 full day**
