Your Vässla Bike

Assembly

Your Vässla Bike arrives (almost) completely assembled!

1. Install the handlebars in the order shown in the graphics below. Make sure that the front part is inserted completely. Insert the sleeves until they are flush and tighten all screws.

2. Screw the rear-view mirrors onto the handlebar. You can tighten them with a wrench.

3. Adjust the brake levers to a position that is comfortable for you.

WARNING

Risk of accident!

Make sure that the screws on the brake lever are properly tightened. Use reasonable force.

4. Open the seat by turning the key to the left and your seat will spring open.

The removable battery is located under the seat of your Vässla Bike.

 Your battery only has an initial charge when you receive your Vässla bike. However, this battery charge is for transportation purposes only and is not sufficient to ride your Vässla Bike.

WARNING

Do not use a defective battery or charger!

This could result in electric shock.

NOTICE!

Fully charge the battery of your Vässla Bike before riding it for the first time. Not doing so will damage the battery.

5. Remove the cover from the charging port and connect the charging cable to the battery.
6. Charge the battery until the green light on the charger comes on.

 The initial charge can take up to six hours. The indicators on the battery only show an estimated charge level. Even if the indicators on the battery show "full", wait until the green light on the charger comes on. The battery reaches its full capacity after three charge cycles.

 You can easily remove your battery and take it with you wherever you go.

NOTICE!

The bottom of the battery is magnetic and attracts metal!

7. Carefully insert the battery into the seat tube. The battery will automatically connect to your Vässla Bike.
8. Close the seat by simply pressing the Vässla logo in the middle of the seat and the seat will snap into the lock.

 You can also charge the battery when it is installed. All you have to do is open the seat and connect the charging cable. Make sure that the charging cable is not damaged.

9. Attach the license plate to the license plate holder on the rear of your Vässla Bike.

10. Inflate the tire pressure to 4 bar.

WARNING

Crushing hazard!

If the tire bead is not yet touching the rim shoulder when you start inflating the tire, the tire bead could jump onto the rim shoulder when the tire is inflated to 4 bar.

11. Reduce the tire pressure to 2.5 bar.

12. Check whether the brake cables are properly aligned.

WARNING

Risk of accident!

Make sure that the brake cables and electric cables do not chafe or hinder steering.

13. Make sure that the front wheel and the handlebars have a full range of motion.
14. Check the mudguard attachment.
15. Make sure that the handlebar is attached to your Vässla Bike correctly and is not loose.
16. Test the brakes and make sure that nothing is loose.
17. Push the power button.

Finished!

Now your Vässla Bike journey can begin.

Always secure your Vässla Bike!

We recommend attaching an external lock for electric scooters to your Vässla Bike. You can buy this in our accessories shop.

Read the complete Vässla Bike Manual carefully for information on correct and safe operation before riding your Vässla Bike!
