

Replication Guide for “Intergenerational Health Effects of Medicaid”

by Hamid Noghanibehambari

The build.do file in the header folder “progs” replicates all the tables and figures in the text. The results are stored in header folders “tables”, “figures”, and “maps”. The stored outputs are named according to their corresponding table/figure number in the text.

The do files in subfolders are named based on their table/figure output. For instance, in the .\progs\regression folder, the Table_3.do replicates the results of table 3 in the text. The output is then saved in the header folder “tables” with .doc extension and a similar name.

Note: to obtain the same quality figures, it should be run with STATA 15+ (previous versions do not generate transparency in figures).
